1984 INDIANA VITAL STATISTICS

Indiana State Board of Health

1330 West Michigan Street, P.O. Box 1964, Indianapolis, IN 46206-1964

INDIANA VITAL STATISTICS SUMMARY

1984

Indiana resident births in 1984 (79,883) were down for the fourth year in a row, and the birth rate of 14.6 per 1000 population was the lowest in the State's history and well below the estimated national figure of 15.7. It also marked the first time since World War II that the total fell below 80,000.

The death total (47,228) was down slightly, as was the rate (8.6 per 1000), which was slightly below the U.S. figure of 8.7.

The fertility rate (births per 1000 females 15 through 44) was 61.6, compared to the national estimate of 66.0. The total fertility rate (lifetime births per 1000 women if current age-specific fertility rates prevailed for their entire reproductive period) was 1696. Both of these rates marked a record low for the third straight year.

Reported abortions (15,343) were up over 10 percent from 1983. The abortion rate was 192.1 per 1000 live births.

The maternal death rate was 8.8 per 100,000 live births, based on seven deaths. There were 838 infant deaths for a rate of 10.5 per 1000 live births. Both these figures were all-time lows. The estimated U.S. figure was 10.6.

Marriages (53,719) were down marginally to a rate of 9.8 per 1000 population, considerably under the national estimate of 10.5.

The State's population, which had been almost unchanged since 1980, showed a modest increase to 5,498,000.

Indiana's 10 leading causes of death were unchanged from the previous year:

Causes	*Deaths 1984*	*Deaths 1983*
Diseases of the Heart	*17,850*	*18,252*
Cancer	*10,805*	*10,285*
Cerebrovascular Diseases (Stroke)	*4,061*	*4,185*
Diseases of the Arteries	*1,349*	*1,430*
Chronic Obstructive Pulmonary Disease	*1,193*	*1,228*
Pneumonia	*1,096*	*1,140*
Motor Vehicle Accidents	*981*	*1,056*
Diabetes Mellitus	*977*	*1,052*
Accidents (exc. Motor Vehicle)	*949*	*982*
Suicide	*654*	*643*
	39,915	*40,253*

The leading causes accounted for 84.5 percent of all deaths, compared with 84.4 percent the previous year. Only cancer and suicide death totals were up from 1983.

INDIANA STATE BOARD OF HEALTH

INDIANA BEHAVIORAL RISK FACTOR SURVEY

In 1982, the Indiana State Board of Health conducted the first Indiana Behavioral Risk Factor Survey. This survey was part of a federal initiative funded and monitored by the Centers for Disease Control. The behavioral risk factor survey was administered by telephone in 28 states and the District of Columbia. A supplemental sample was conducted by the University of North Carolina in all remaining states except Hawaii. The objective of the survey was to obtain state level prevalence estimates of the health behaviors linked to the ten leading causes of premature death among adults in the United States. Indiana findings were published in a report entitled Health Risk Survey of Indiana Residents, by the Division of Health Education.

In 1984, the telephone survey was conducted again. The sample, comprised of 480 Indiana residents, had an estimated precision of plus or minus 5 percent at the 95 percent confidence level. Only individuals over the age of 18 were interviewed. The risk factors surveyed were cigarette smoking, hypertension, acute and chronic alcohol use, drinking and driving, seat-belt use, physical activity, and weight. A brief summary of the results are presented here.

SEAT-BELT USAGE

In 1984, approximately 26 percent of the Hoosier population reported wearing their seat belts all the time. This means that almost three fourths of our population are at risk for premature deaths or disability. Out of the total 26 percent, 52 percent were males and 48 percent were females. Motor vehicle accidents were the seventh leading cause of death in Indiana in 1984.

SEDENTARY LIFE-SYTLE

A sedentary life-style is defined as any activity done for less than 20 minutes or less than three times per week or no reported activity at all. It is believed to be a risk factor for heart diseuse, which is the leading cause of death in Indiana and the United States. Almost 54 percent of our population is at risk because of a sedentary life-style. About 53 percent of all men and 54 percent of all women fall into this category.

SMOKING

Currently, 26 percent of our population report that they smoke. This means that within the State of Indiana approximately one million adults are current smokers. Twenty-eight percent of the male population smoke as compared to 23 percent of the female respondents. Smoking is associated with heart disease, cancer, stroke, diseases of the arteries, other accidents, and other chronic obstructed pulmonary diseases (COPD). These six causes of death accounted for 76.7 percent of all deaths in Indiana for the year 1984.

OBESITY

Using the definition of obesity as being at or above 120 percent of ideal weight, almost 24 percent of Indiana's population are obese. For males, almost 21 percent are defined as obese, and slightly more than 26 percent of women are obese. Obesity is linked with a variety of health problems including cancer, diabetes, and heart disease.

HYPERTENSION

Approximately 18 percent of Indiana's population have a history of high blood pressure. Our findings suggest that twice as many females as males fall in this category. Hypertension is associated with heart disease, stroke, and diseases of the arteries.

ALCOHOL CONSUMPTION

Eight percent of the respondents are chronic drinkers. The chronic drinker is defined as a person who consumes 60 or more drinks per month. Only about one percent of the total eight percent was females, which indicates that men are at higher risk of developing alcohol-related health problems and even a premature death. Chronic drinking, as well as acute drinking, is associated with motor vehicle accidents, suicide, homicide, and a variety of other health problems.

Table A shows the five leading risk factors for each age group and the five leading causes of death for the same age group. The death rates are age-specific.

INDIANA, 1984

Table 1. RESIDENT VITAL STATISTICS SUMMARY

Notes:

*Rates:

Births, Marriages and Total Deaths	- per	1,000 population
Deaths from Specific Causes	- per	100,000 population
Stillbirths and Infant Deaths	- per	1,000 live births
Abortions	- per	1,000 live births
Maternal (Part A)	- per	100,000 live births
Fertility Rates: Births	- per	1,000 females 15-44

Total Fertility Rate: The number of births 1,000 females would have in a lifetime if the fertility experience of 1984 prevailed. Calculated by taking the fertility rate for each five-year age group 15 through 44 (15-19, 20-24, etc.), adding, then multiplying by 5 (since each female would have five years experience in each age group). A total fertility rate of approximately 2100 is necessary to maintain the population on a permanent basis.

**Includes deaths listed in younger age groups

Estimated Population, Indiana, July 1, 1984 5,498,000

A. Births, Deaths, Stillbirths, Marriages and Rates

	Number	Rate*
Births	79,883	14.6

INDIANA, 1984

Table 2. RESIDENT BIRTHS, DEATHS, INFANT DEATHS, INDIANA, EACH COUNTY, EACH INCORPORATED PLACE AND EACH UNINCORPORATED PLACE OF OVER 1,000 POPULATION IN THE 1980 CENSUS, FOR THE FIVE-YEAR PERIOD 1980-1984

NOTES:

Natural Increase equals births minus deaths
Percent Natural Increase based on 1980 Census population
Infant Deaths are deaths under one year
Infant Death Rates per 1,000 live births

In general, figures for unincorporated places will probably be low, since many births and deaths to residents of these places may be recorded as rural.

INDIANA, 1984

Table 3. ESTIMATED POPULATION* AND RESIDENT LIVE BIRTHS, DEATHS, STILLBIRTHS AND RATES, FOR EACH HEALTH SERVICE AREA, EACH COUNTY AND EACH CITY OVER 5,000 IN 1980 CENSUS

RATES:

Birth and Death Rates per 1,000 Population
Stillbirths ratio per 1,000 Live Births

Because of rounding, county population figures do not add to State total.

	Estimated Pop. (in Thousands) July 1, 1984	Number			Rate

INDIANA, 1984

Table 5. RESIDENT TOTAL BIRTHS, LIVE BIRTHS, MATERNAL, INFANT, NEONATAL AND PERINATAL DEATHS AND DEATH RATES FOR EACH HEALTH SERVICE AREA, EACH COUNTY AND EACH CITY OVER 5,000 IN 1980 CENSUS

NOTES:

Total Births.....	Live births plus stillbirths
Maternal Death Rate.....	per 100,000 live births
Infant Deaths.....	Deaths under one year
Infant Death Rate.....	per 1,000 live births
Neonatal Deaths.....	Deaths under one month
Neonatal Death Rate.....	per 1,000 live births
Perinatal Deaths.....	Deaths under one month plus stillbirths
Perinatal Death Rate.....	per 1,000 live births
